1

Download NoSQL Workbench at:
https://docs.aws.amazon.com/amazondynamodb/latest/developerguide/workbench.settingup.html
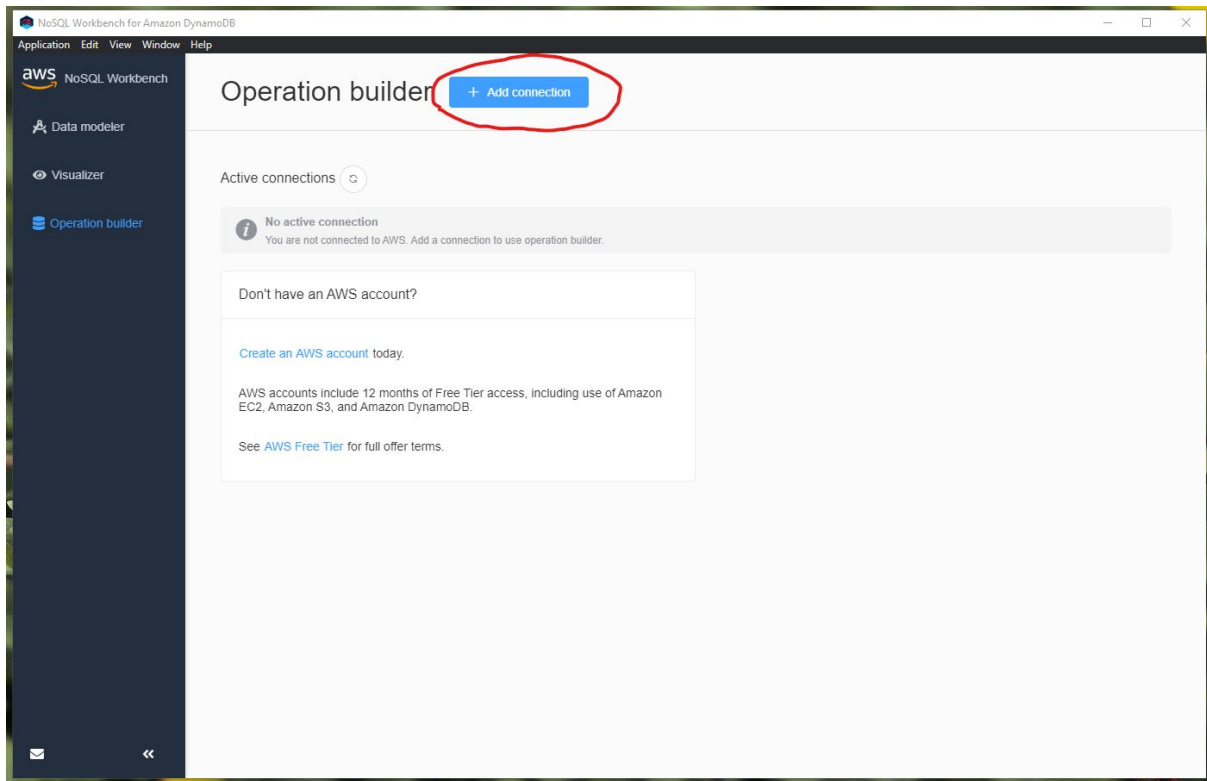

2

Install and open NoSQL Workbench. Click 'Operation builder' in the left sidebar

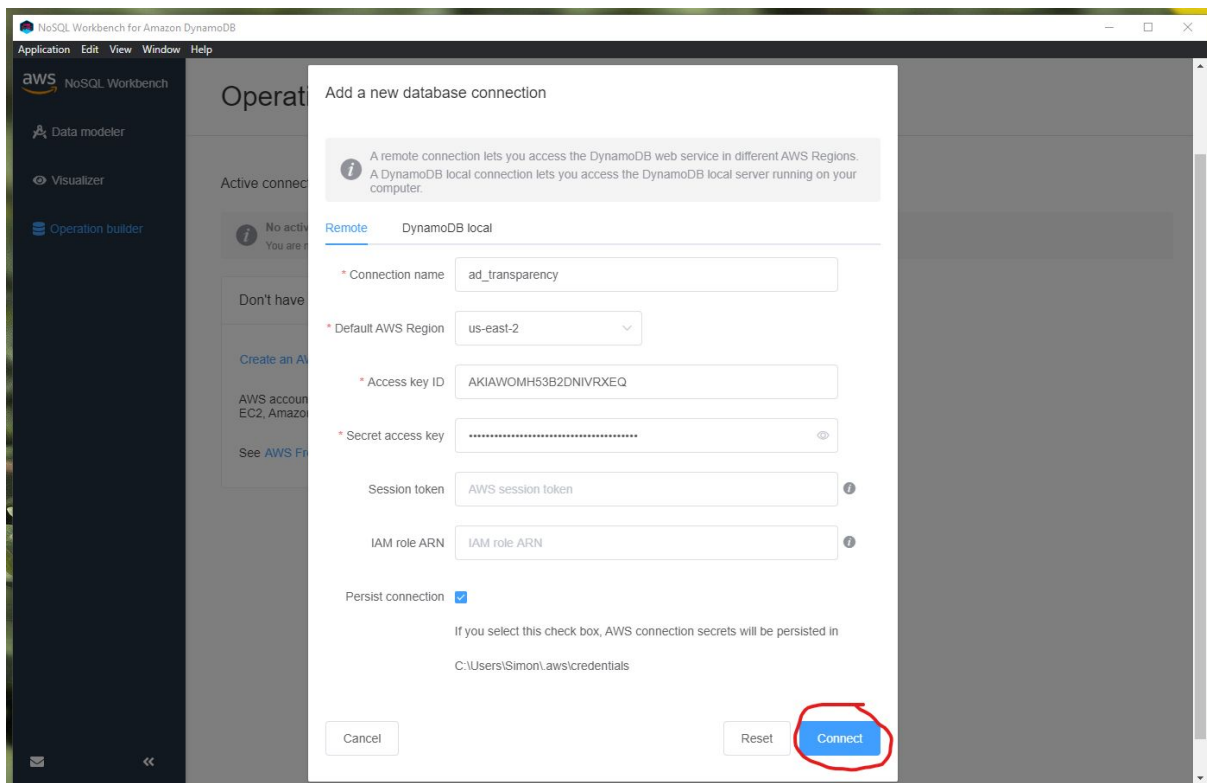

3
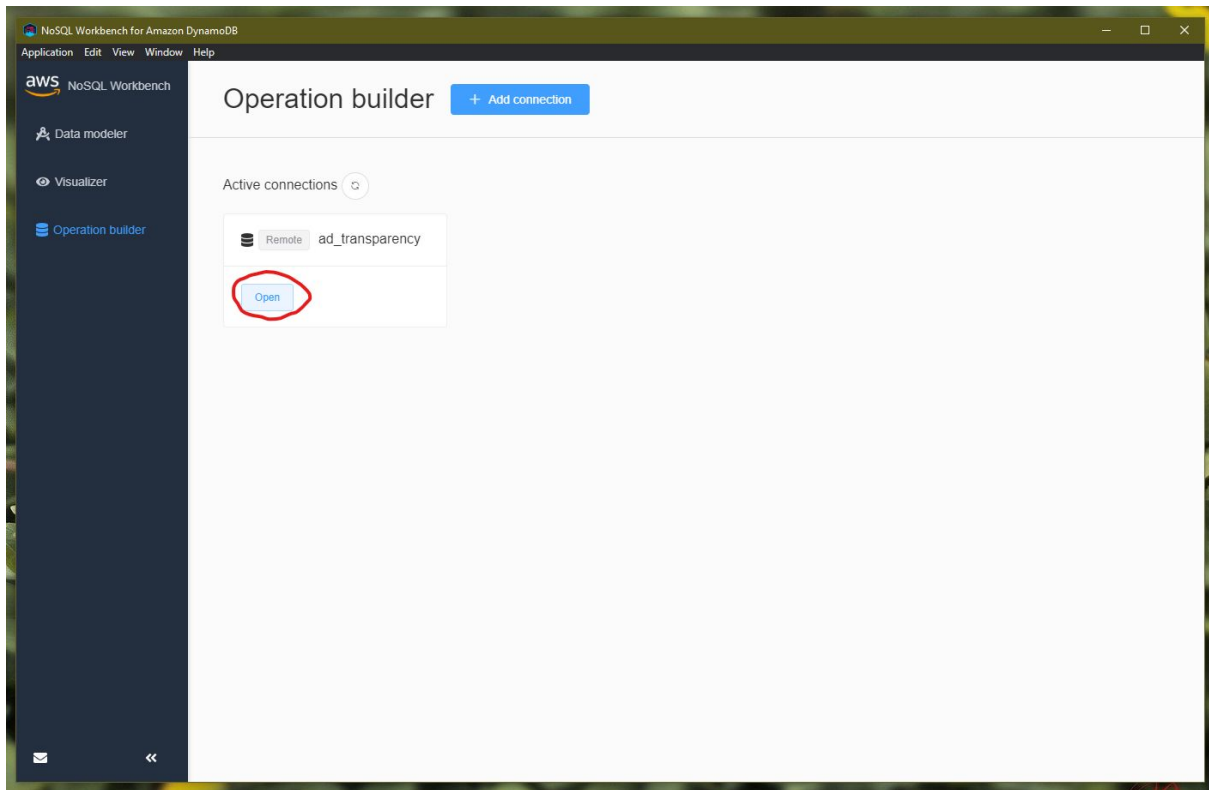

Click the 'Add connection' button

4

Fill out the form as follows. 'Secret access key' can be found under 'config/keys.py' in the repository. Click the Connect button
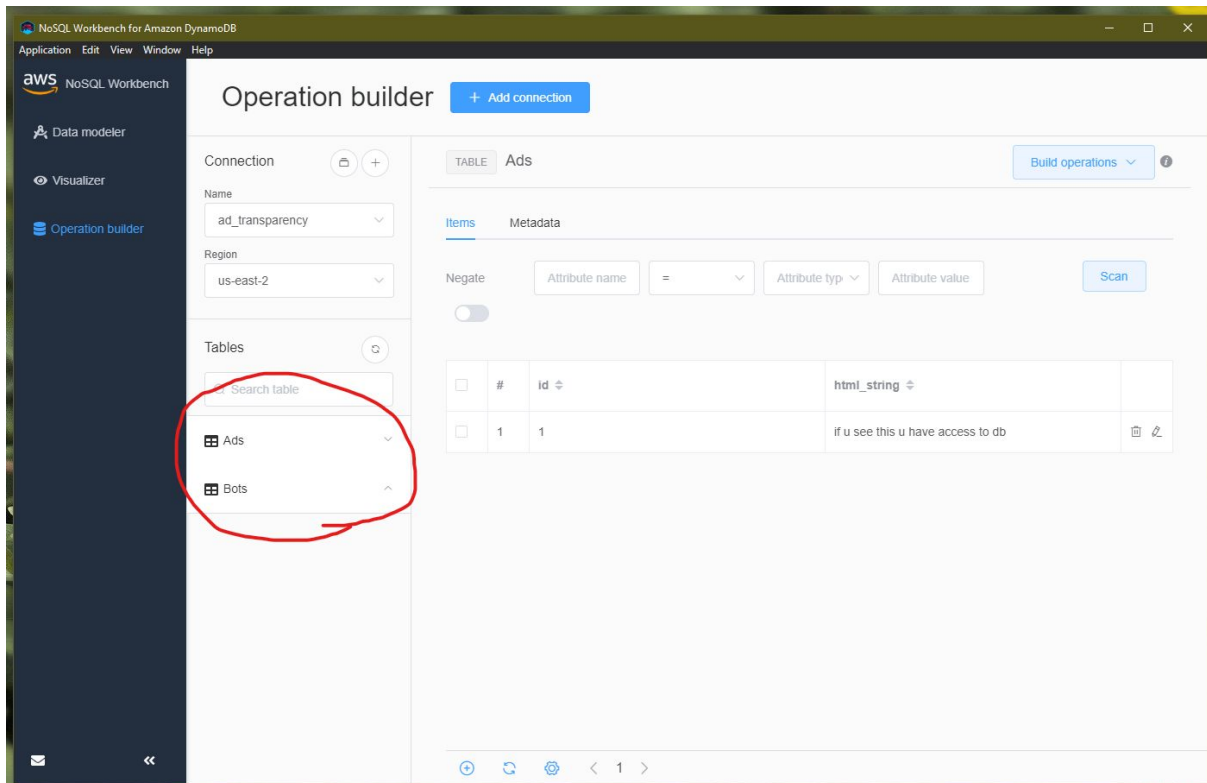

5

Once created, click the 'Open' button of the newly created connection

6

Tables are listed in the left bar. This screen shows the 'Ads' table selected.

7

Searching is done using the fields to the left of the 'Scan' button. For example this screen shows a search for documents with 'id' equal to 1

8

Advanced searching and editing of the tables can be done through the 'Build operations' button in the top right
